

THE Bamtex Collection

Bamboo Flooring

Bamboo – a staple of Eastern Cultures for centuries, is actually in the grass family and is harvested in six year cycles. With its unique linear look, Bamboo is an ideal environmentally friendly flooring choice.

How to Choose Bamboo

- **Natural** - Bamboo in its natural state is a rich golden yellow
- **Carbonized** - Carbonizing takes the natural straw-colored bamboo through a heat process which turns it a caramel brown color throughout.

Graining

- **Horizontal** construction is produced by positioning bamboo strips side-by-side and is a wide strip linear-look showing the knuckle of the bamboo.
- **Vertical** construction is produced by turning the bamboo strips on edge, yielding a narrow strip linear-look.
- **Strand** is a process in which bamboo is shredded and reconstituted by mixing it with a resin yielding a dense variegated product.

Solid Bamboo - Available in vertical, horizontal and strand graining
 Dimensions: 5/8" by 3-5/8" by 3' or 6' Strand - 9/16" x 3-3/4" x 6'
 Finish: prefinished satin gloss with micro-beveled edges and ends

Vertical Grain
Shown in Natural

Horizontal Grain
